# Packet Tracer 7.2.3 Network Redundancy Installation Checklist

The purpose of this test plan is to demonstrate that the network, because of its redundant design, can recover from failed links. Download and complete the Stadium Redundancy Test Plan document as this test is performed.

Installation Steps	Completed
Test 1 Requirements:	
Step 1: Verify the configuration and operation of EIGRP.	
Step 2: Verify the configuration and operation of Spanning Tree Protocol.	
Step 3: Simulate a failure in the switched portion of the network and verify and observe recovery.	
Step 4 Simulate a failure in the routed portion of the network and verify and observe recovery.
